

Perseids / Perséides 2019

Quick summary of the Perseids 2019 on 144 MHz. Between August 8th and 18th, 2019, I made 43 QSO's with the following stations : UT2UB, EW7AW, SP800U, EA4SG, 0K2W0, EU4AX, C37MS, 9A3MR, SM3LBN, SP2MHR, UA3LID, UT9UR, LA/SM5EPO (JP72, 75, 76), SQ5GVY, SP7QJF, OH1ND, OH1MN, EM44T, UT7KF, OG2Z, Y02LSP, YU7ON, RA1TL, R5WM, SM4GGC, LZ0C, US8AR, UT8AL, EA3MS, OH1XT, SM3XGV, EB5EE0, CT7ABA, SF6F (2 QSO's), S50TA, S51Z0, LZ2F0, SV2JA0, Y02BBT and HA6VV.

I omit the reports on purpose (MS Sprint Contest). The furthest station worked was R5WM over 2166 km. Amongst other 2000 km+ QSO's, US8AR was using 100W/9el and UT8AL used only 25W/21el ! On August 18th in the morning, during the YO Marathon, 9A, Italian FD contests, there was an outburst. I worked Y02BBT in SSB but failed to complete with Y07FWS during a 1 min MS burst. Both called me at the end of a Tropo QSO with OK1RDO, also in OK Contest.

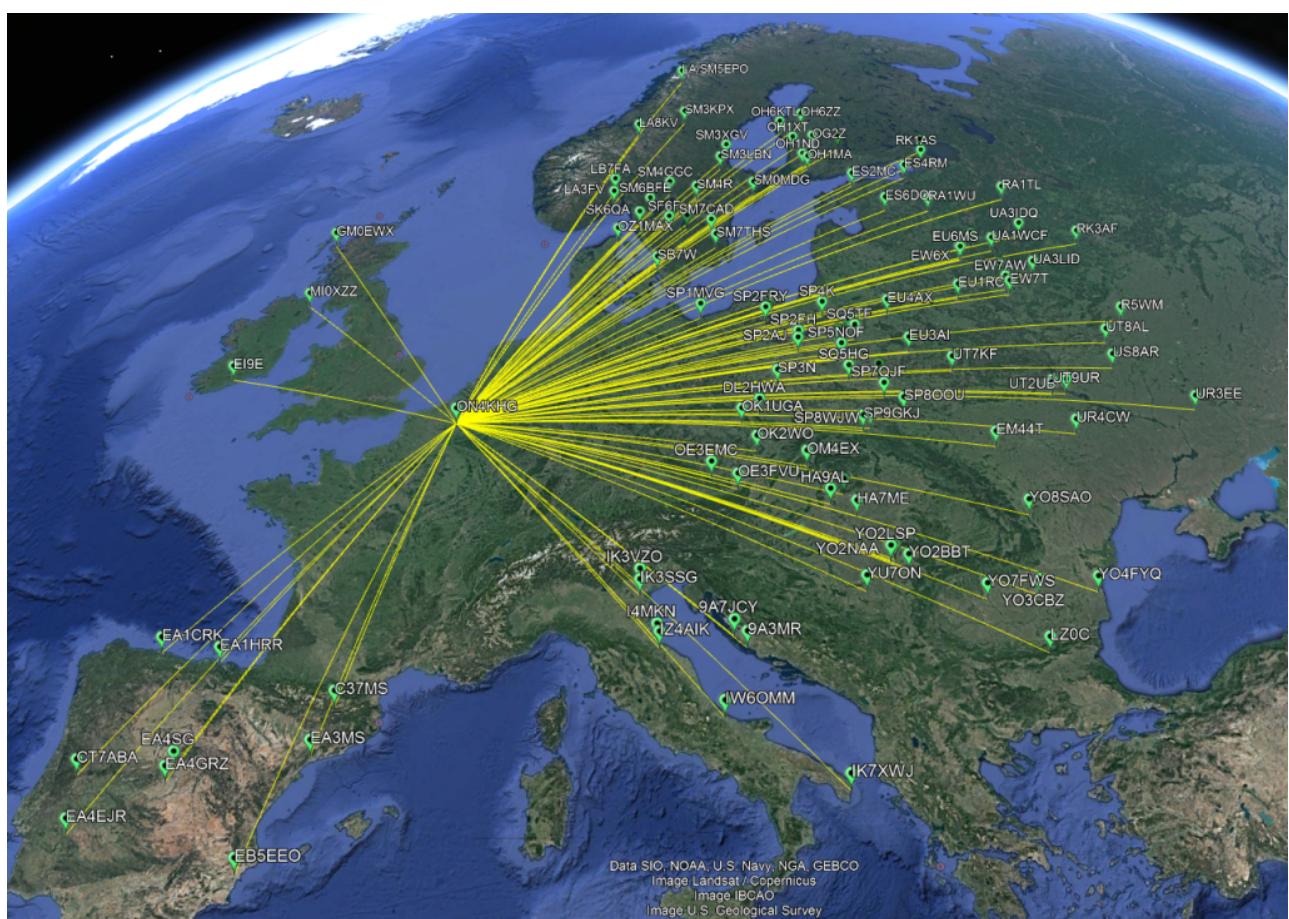

Most of the above mentioned QSO's were random, few ones by taking a sked on ON4KST. 32 out of the 43 were made using MSK144, 10 were in FSK441 and 1 in SSB.

Squares worked (click on the maps below to enlarge) :

I didn't notice a real peak of the Perseids, or perhaps on the 13th in the early morning. Also visually, it wasn't that much a fireworks, at least when I watched outside ! This year during the Perseids, we "suffered" from the same newbies we face in FT8 : people ignoring what MS is all about, calling you via Tropo and using uncoordinated 15 sec periods, just because it is embedded as is in WSJT-X...

By making some data processing (excluding the stations < 800 km) with exports from PSK reporter in Excel and kml mapping tools outputting into Google Earth (drop me a mail at on4khg@voo.be to know how to), one comes up with **the map of all the stations I heard** (mostly MSK144) during the Perseids (the furthest heard was UR3EE at 2314 km) :

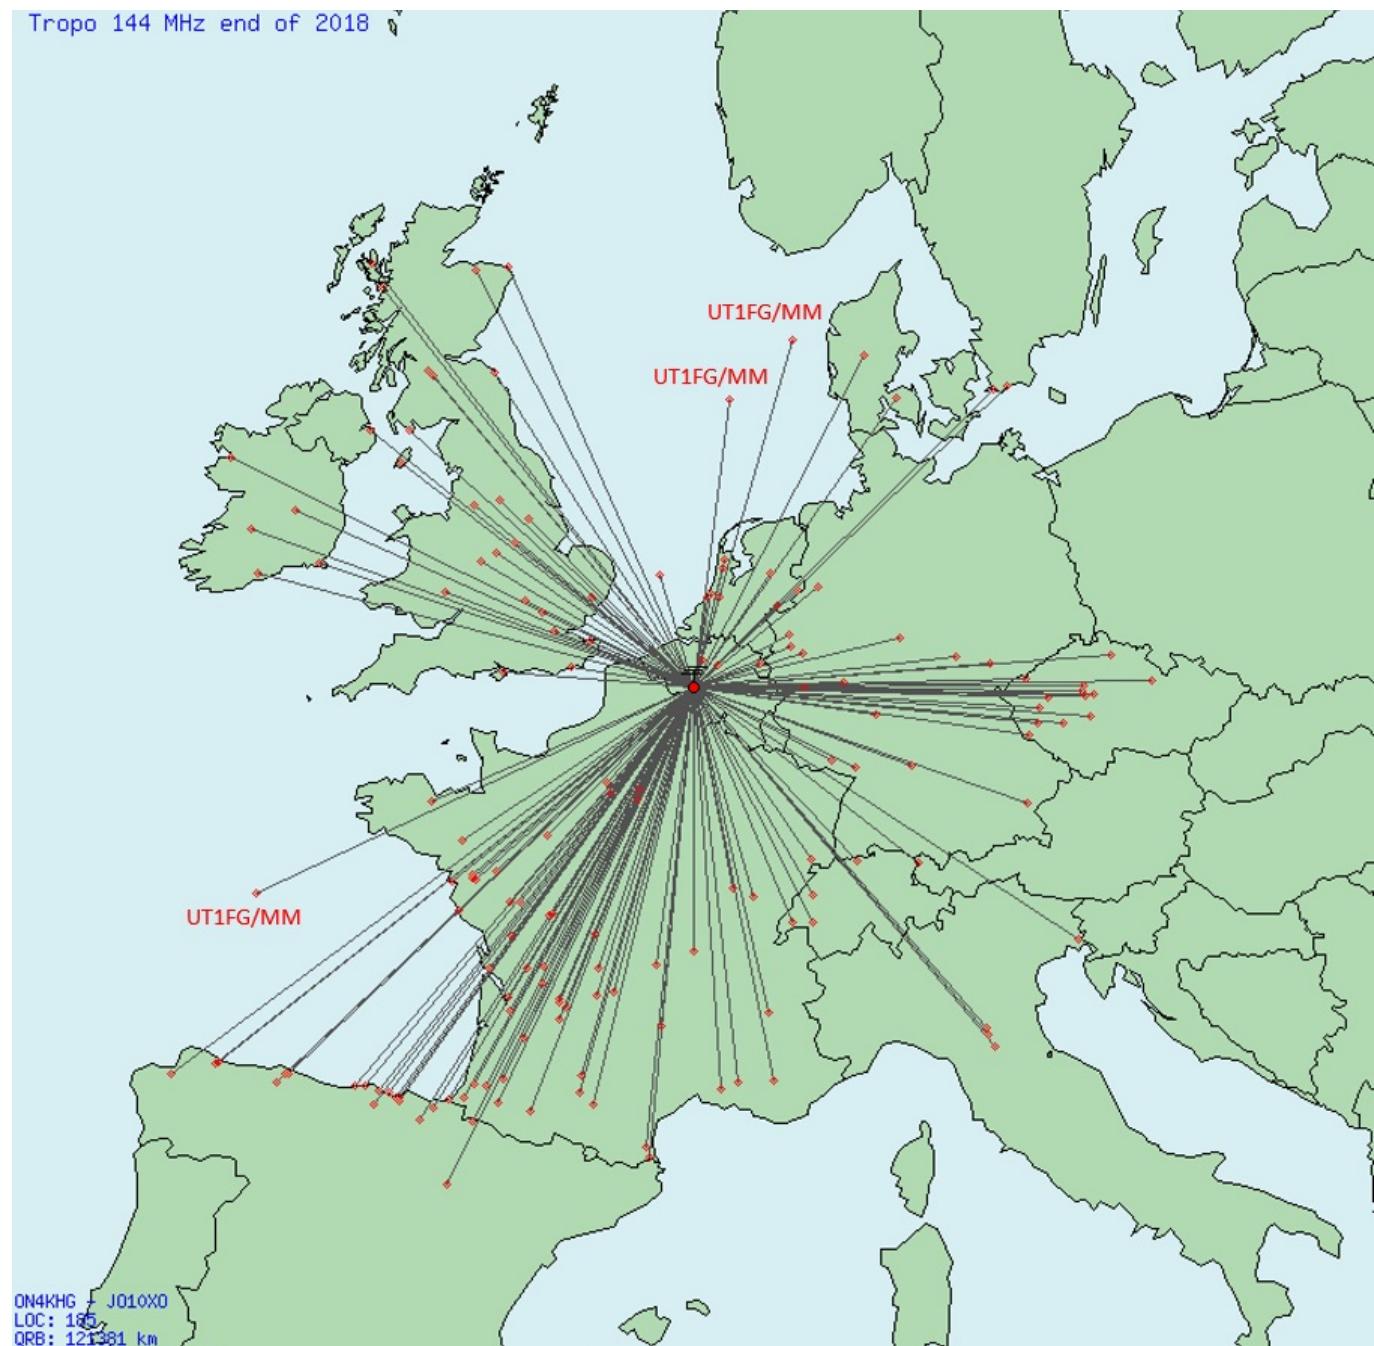

By making a likewise data processing for **the stations that heard ON4KHG**, we have (furthest was RA3EL at 2206 km) :

144 MHz tropo opening of end of 2018 and beginning of 2019

Below the map of the QSO's I have been lucky to work on 144 MHz during the period December 25th, 2018 to January 6th, 2019. The conditions lasted for days, thanks to a steady high pressure system over Western Europe. Stations on the North coast of Spain were hearing the OY beacon but unfortunately there was no activity from the Faroes Islands. In J010X0, I was out of the North-South duct but I could benefit however from excellent conditions from South-West to North-West. UT1FG/MM was worked while in IN66, J012, J025 and J036 (3 new #). I missed IN67 as I was out for the New Years eve. The map depicts SSB, CW and FT8 QSO's.

Tropo 144 MHz end of 2018

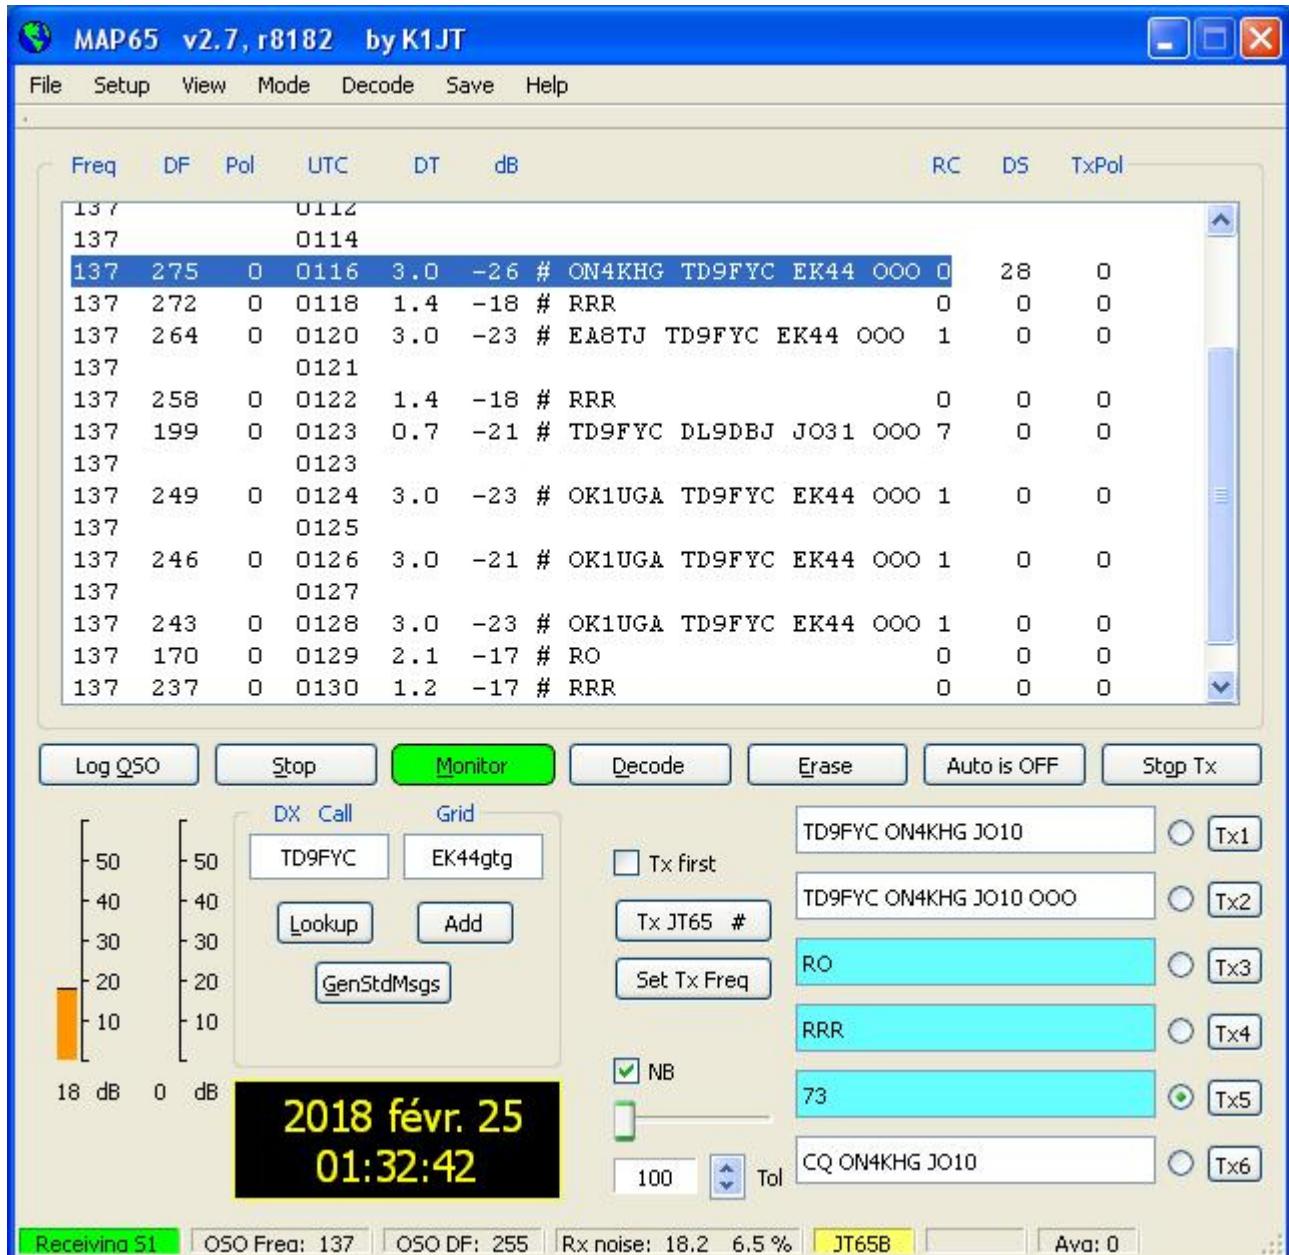

EME 144 MHz : TD9FYC, DXCC

#143

En février/mars 2018, Chris PA2CHR et Jos PA3FYC ont activé le Guatemala au travers d'une DX-pédition tribande (144-432-1296), depuis le carré locator EK44SB. J'ai eu la chance de contacter assez facilement **TD9FYC** (toujours en total "random", c'est-à-dire sans notification de mon appel sur un logger/chat). Merci Chris et Jos pour ce nouveau DXCC (143 ème) sur 144 MHz !

In February/March 2018, Chris PA2CHR and Jos PA3FYC have been activating Guatemala in a triband (144-432-1296) DX-pedition, as from the grid square EK44SB. I have had the chance to work **TD9FYC** somehow easily (always in total "random", i.e. without notification of my call on a logger/chat). Thanks Chris and Jos for this new DXCC (143th) on 144 MHz !

Worked All States (WAS) 144 MHz

Début novembre 2017 (le mois “anniversaire” de mes 30 ans de radioamateurisme...), j'ai eu l'immense plaisir de recevoir le diplôme Worked All States (WAS) numéro 208

sur 144 MHz. Il récompense le fait d'avoir contacté au moins une fois chaque état américain, en l'occurrence par réflexion sur la lune en ce qui me concerne. Avant de l'obtenir, il a fallu également collecter et faire vérifier toutes les cartes QSL. La station, ou plutôt les différentes stations utilisées au fil des ans sont restées relativement modestes, le tableau ci-dessous renseigne antennes et puissances utilisées. 35 états ont pu être contactés avec une seule antenne et sans élévation, mais certainement en profitant de "[gain de sol](#)", difficile à quantifier précisément, mais de l'ordre de 4-5 dB. Merci à tous, et en particulier à Gene, KB7Q (qui a activé plusieurs états rares) et à Jim, N1NK (qui m'a permis de contacter le dernier état tant attendu, Rhode Island).

Beginning of November 2017 (the "anniversary" month of my 30 years as ham radio...), I have had the great pleasure to receive the Worked All States (WAS) award number 208 on 144 MHz. It rewards the fact of having worked at least one time every US state, thanks to moon bouncing in my case. Prior to get it, it has been needed to collect and make check all the QSL cards. The station, or rather the stations used over the years have remained relatively modest, the table below indicates which antennas and powers have been used. 35 states have been worked with a single antenna without elevation, but certainly benefiting from "[ground gain](#)" (in French), difficult to quantify precisely but somewhere around 4-5 dB. Thanks to all and in particular to Gene, KB7Q (who activated several rare states) and to Jim, N1NK (who allowed me to work the last long awaited state, Rhode Island).

EME 144 MHz : 3 new DXCC in a week / 3 nouveaux DXCC en une

semaine

Semaine fructueuse en EME sur 144 MHz, 3 nouvelles contrées DXCC ont pu être contactées. D'abord le 8 octobre, l'expédition **RI1F** active depuis la Terre François Joseph (Franz Josef Land), un territoire russe situé en arctique. Vladimir R9LR, un opérateur EME, s'était joint à l'expédition. Malgré le pile-up, j'ai eu la chance de réaliser le QSO assez facilement. Il s'agit aussi d'une première (first) Belgique – Terre François Joseph sur 144 MHz.

Fruitful week in EME on 144 MHz, 3 new DXCC countries could be worked. First on October 8th, the expedition **RI1F** active from Franz Josef Land, a russian territory in the Arctic. Vladimir R9LR, an EME operator, joined the expedition. Despite the pile-up, I have been lucky to make the QSO somehow easily. It is also a first Belgium – Franz Josef Land on 144 MHz.

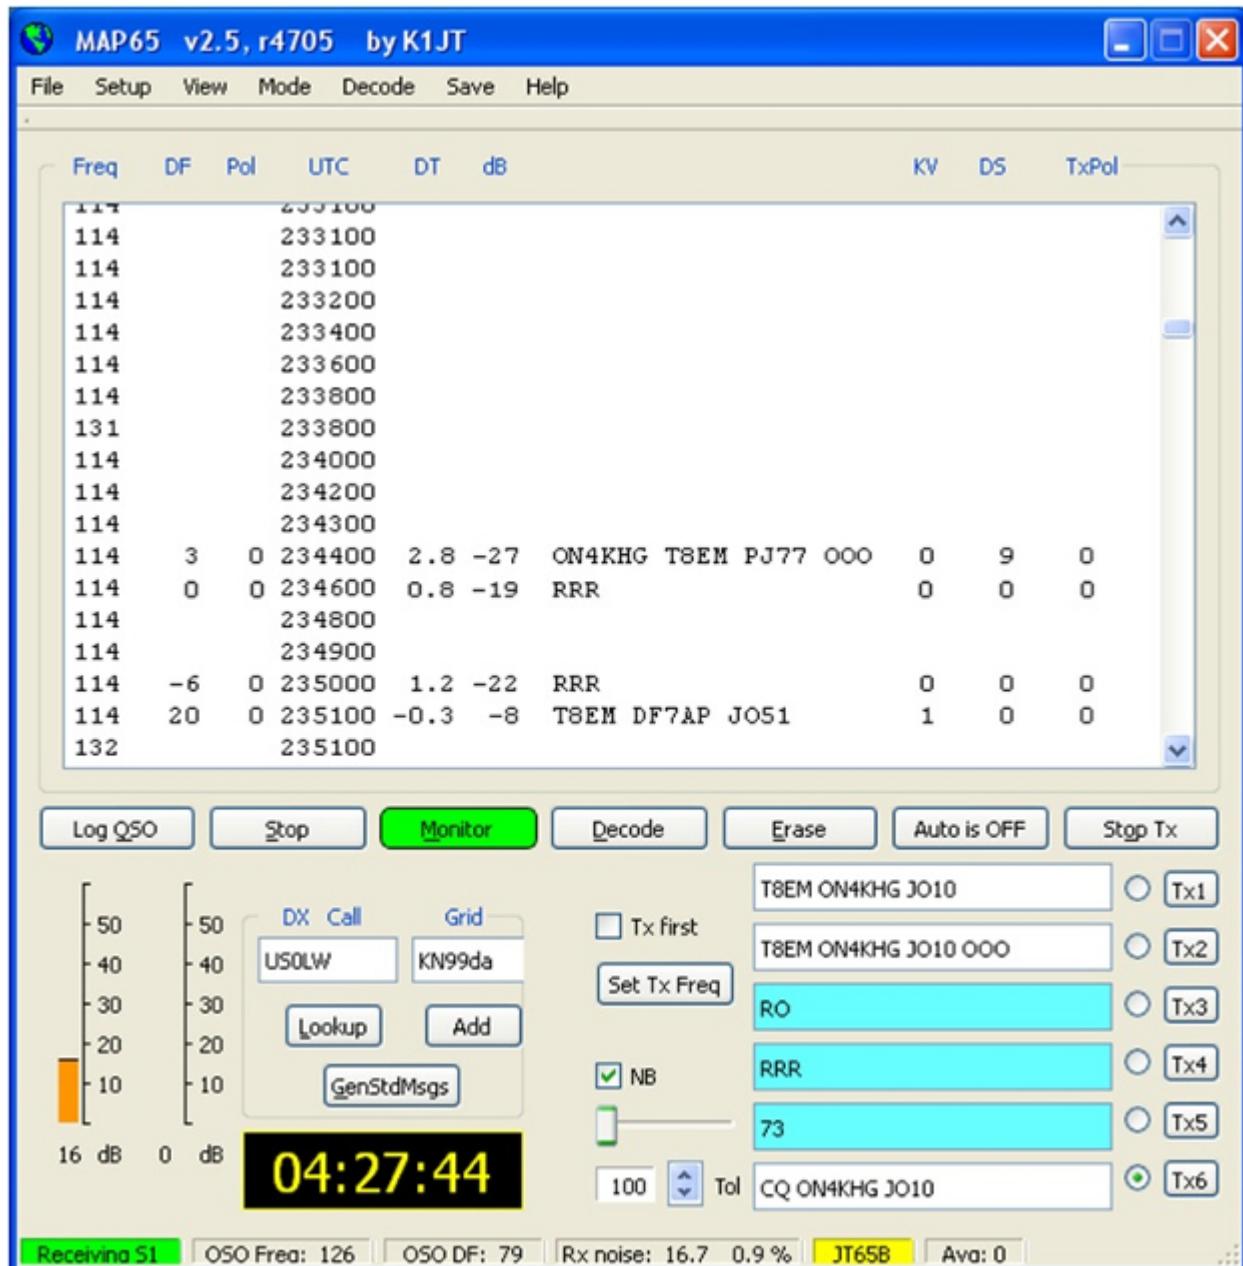

Ensuite le 12 octobre, **T8EM**, l'archipel de Palau (Pacific ouest) était dans le log comme DXCC numéro 138 sur 144 MHz. Cette expédition était conduite par Taka JP3EXR et Kay JH3AZC, qui ont contacté plus de 200 stations en EME. Une vidéo Youtube de leur expédition est visible [ici](#).

Then, on October 12th, **T8EM**, the Palau archipelago (Western Pacific) was in the log as DXCC number 138 on 144 MHz. This expedition was conducted by Taka JP3EXR and Kay

JH3AZC, who worked more than 200 stations in EME. A Youtube video of their expedition can be seen [here](#).

Et finalement, le 15 octobre, c'était au tour de **3DA0MB** (Swaziland) de trouver sa place dans mon log. Il s'agissait d'une expédition EME multibandes (de 6m à 3cm !) dont les membres étaient Vincent 3DA0VV, Lins PA3CMC, John ZS6JON, Chris PA2CHR, Alex ZS6EME, Andrew ZS6AVH, Bernie ZS4TX, Sam HB9C0G, Dan HB9CRQ. Le 14 octobre, j'ai appelé 3DA0MB durant 4 heures, avec comme

résultat 2 QSO's incomplets. Le lendemain, un seul appel et bingo, QSO réalisé juste à temps, avant de prendre la direction de Bruges pour y participer au semi-marathon...

And finally, on October 15th, it was the turn of **3DA0MB** to find its way into my log. This was a multiband EME expedition (from 6m to 3cm !) whose members were Vincent 3DA0VV, Lins PA3CMC, John ZS6JON, Chris PA2CHR, Alex ZS6EME, Andrew ZS6AVH, Bernie ZS4TX, Sam HB9COG and Dan HB9CRQ. On October 14th, I have been calling for 4 hours, with as result 2 uncomplete QSO's. The day after, a single call and bingo, QSO done just right before leaving to Brugge, to compete in the half-marathon...
